

RE: 5.250 to 5.400 MHz Recommendations

Allow 1500 watts output power

Extra class for 5.250 to 5.275 cw/digital/narrow modes only

General class and higher 5.275 to 5.300 cw/digital/narrow modes only

General class and higher 5.300 to 5.400 SSB/cw/etc

I believe sub-banding is necessary because of the trouble that we have on 160 meters. Lets not create that problem again.

Thank you for the new bands, it will be a joy to operate there.

K3GT, Bob Thacker
